Unfortunately, I was busy when it arrived and opened it just past the return window, but I want to warn other potential buyers to avoid this book. Like Betsy Clebsch's earlier books, it is full of information, but the quality of paper in printing is indescribably bad. The pictures look as if they were printed on an inkjet printer on regular paper,

then darkened so that no color remains and very little detail is distinguishable. A salvia described as "sparkling blue" is pictured with the faintest hint of blue on a sea of mud brown. It is worse than amateurish. I am so disgusted, I will write to the publisher. If they are not responsive and do not offer to refund my money, I will have to donate the book. I honestly cannot bear to look at it. Shame, shame on the publishers....and I note that they did not provide a glimpse inside as they did with earlier editions which featured stunning photography. Misleading. This is only the second negative review I have ever written in 22 years of internet use and buying - that is how horrible this edition is. 0 of 3 people found the following review helpful. Five Stars By Dorothy Heimgartner Great Book

Highlights 150 beautiful sages species and hybrids

I discovered from this book that there are medicinal, cold-tolerant, shade-tolerant and water-wise salvias, too.
