This is the most comprehensive and up to date book about sergers available covering all skill levels from basic to

expert. Although advanced topics are covered the book is easy to navigate and understand. Many people find threading a serger to be difficult, so an entire chapter is dedicated to threading and basic use. The book goes on to cover advanced topics such as troubleshooting, adjustment, maintenance repair. Covered in-depth are adjusting tension, stitches, decorative stitches, needles, feet, thread and more. From home sergers to industrial overlock machines and coverstitch machines many of the latest machines are featured with insights on features, capabilities and best use for each model or class of machine. Buying a serger can be frustrating and time consuming because of the overwhelming number of features and types of machines that are available. The buying recommendations will help you cut through the confusion and figure out what features you really need. Most people have a love/hate relationship with their serger. Everything is great when the machine is working good but most people hate them when frustrating problems arise. This book will empower you to eliminate the hate part of the relationship and put you in control of the machine. In depth sections on adjusting tension and troubleshooting will help you handle most problems (and know which problems not to tackle). Above all sergers are creative tools. If you know and understand the tools you can use them efficiently and effectively. For sewing machines check out our top selling companion book "The Sewing Machine Master Guide" and for sewing machine basics "The Sewing Machine Quick Guide". About the AuthorCliff Blodget learned to sew as a kid repairing tents and clothing. He became interested in sewing machines and discovered that with some adjustment, lubrication and TLC almost any sewing machine could be fine-tuned to sew like a new one. He recalls "Sewing machines have always fascinated me, they have a certain elegance and nostalgia factor. My favorites are the art deco style machines from the 1930's through the 50's". Cliff has a BS degree in computer science and worked as an RD Engineer and Technology Officer in electronics manufacturing. He never lost his interest in sewing machines. Later he became involved with sewing machines again, modifying and designing sewing equipment and processes for the production of sewn products such as cell phone cases and sportswear. He was frequently asked to recommend a good book on sergers, but could not find one that was up to date and comprehensive so he decided to write this book.
