They needed more adult assistance than I thought for our six year old. Great activity for kids to do with a grownup. The book is very appropriate for older kids too. Glad I bought "Kids Paper Air Planes" too.2 of 2 people found the following review helpful. The designs and instructions are amazing. Even when being extremely careful, you still might tear it. The pages -which you fold to make the planes-are beautifully designed and glossy. However, its a

flimsy material. If the pages were a little stiffer, it would make for better flying i think.0 of 0 people found the following review helpful. Great new paper planes!By SniffanyBMy third grader had a market day where the kids get to come up with a business, name it and make the products to sell. He and his partner chose to do paper airplanes and this book was a total hit for the two of them. They didn't make much money but I think they had more fun learning the cool new airplanes to make. The patterned paper that is in the book is really cool, wish it was easier to tear out for kids, it seemed to tear easy but I think it's because they weren't doing just right. My favorite one that I didn't think would really fly was the cylinder. It totally flies and so easy to make along with the helicopter thing. It's a lot of fun and totally recommend even for just having for rainy days or the kid who loves making paper airplanes!
